Art inside Glass

Fascinating possibilities

In cases where extravagant design and stylish ambience are the main objectives for an entire room, every single detail must fit in to form a perfect image. Here, fabrics can always be used as fascinating design elements, because their quality, texture and appearance offer such a wide variety of different looks. Unfortunately, fabrics are not particularly well-suited for use in areas that are subject to considerable wear and tear.

Nevertheless, the idea factory at SCHOTT has now come up with a laminated glass that even makes

this application possible, without taking away from the visual attraction of fabric.

MOODGLASS consists of two panes of nearly invisible AMIRAN® glass from SCHOTT with fabric from JAB ANSTOETZ found between them.

With its visual appearance that resembles traditional wall spanning that is protected between panes of anti-reflective glass, MOODGLASS builds the bridge to painted and printed surfaces without losing the 3-dimensional texture of the fabric.

This makes it possible to put fabrics to use as design elements even in buildings that are subjected to considerable traffic.

Examples include glass doors in MOODGLASS with curtains made of the same fabric in front of the windows and matching carpets,

but also partitions, wall coverings and protection from the sun ...

The innovative combination of high-quality fabrics from JAB ANSTOETZ and nearly invisible AMIRAN® glass give creative individuals entirely new opportunities when it comes to executing interior design.

AMIRAN® is an optical interference anti-reflective glass, dip-coated on both sides, with residual reflection of approximately 1%. This makes the glass almost invisible. If treated properly, AMIRAN® can be cleaned just like ordinary glass. Even the most challenging stains can be removed using the appropriate cleaning agents.
