SCHOTT
glass made of ideas

adaptiQ™

THE FUTURE  FAST FORWARD

Welcome to the future: adaptiQ™

With SCHOTT adaptiQ™ ready-to-use vials you will be able to enter a new era of cutting edge manufacturing. Welcome to a future that gives you more freedom with a leaner process, improved quality and more flexibility.

Developed in cooperation with innovative and respected machine suppliers, adaptiQ™ allows the vials to remain nested during the lyophilization process.

More quality

The nest design of SCHOTT adaptiQ™ works completely glass-to-glass contact free. That significantly reduces glass breakage throughout the entire manufacturing process and improves cosmetic quality.

More flexibility & efficiency

By using a standard syringe tub you will be able to fill multiple container on the same machine and raise your efficiency by using all your capacities.

Improved cost of ownership

Profit from improved total cost of ownership with less clean room space required, higher line yield and the possibility to reduce the running costs.

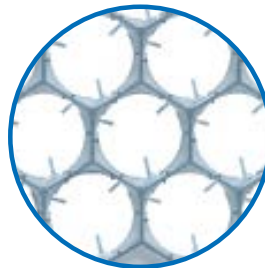

Unique clip design allows distinct reduction of glass breakage and cosmetic defects

Free vial bottom allows for lyophilization in nest

Honey comb structure: no glass-to-glass contact and high stability

High density of vials to reduce waste and maximise productivity

adaptIQ™ Product Check

- Sterile, clean and ready-to-use in a nest and tub configuration
- Freeze drying in nest possible
- Glass-to-glass contact avoided completely throughout fill & finish
- Non-sterile nest samples available now
- Commercially available Q1/2015
